DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 58-89 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Re claims 55, 70, 74 & 83, the phrase "a single crystal silicon structure... including two oppositely disposed substantially **vertical major surfaces and including two oppositely disposed generally horizontal minor surfaces wherein the aspect ratio of major surface to minor surface is at least 5:1**" is not supported by the specification.

Claims 56-69, 71-73, 75-82 & 84-89 are rejected because each includes the limitations of independent claims 55, 70, 74 & 83.

Response to Arguments

3. Applicant's arguments filed 01-24-05 have been fully considered but they are not persuasive.

"Summary of the invention" describes the embodiment as described in Fig.1 which is issued as U.S.Patent No. 6,316,796. The Fig.9 does not show that single

crystal structure is formed in the first wafer layer and a carrier, which includes a recessed region is secured to the first wafer layer such that said structure is suspended opposite the recessed region.

The "aspect ratios of up to 20:1" means the holes or trenches (page 17, lines 17-20) but not single crystal silicon structure. The specification describes the ratio is between the depth of the etched region and the width of the etched region. Thus, the ration 20:1 does not mean the ratio of major surface to minor surface.

Fig.9 shows a suspended structure 218 surrounded by such high aspect ration channel 216. the channel 218, which has a high aspect ratio, is made using DRIE process used in Fig.8.
